

We have been advised that there will be a hearing on April 5th in regard to traffic speed controls on Lincoln Avenue. During the previous experiment, we noted that the speed humps were effective in reducing the speed of cars and we are happy that you are planning to install them again.

Since we may not be able to attend the hearing, we would like to suggest that the speed hump that will be placed in front of our house be moved about 40 feet to the south of its previous location so that it will be directly under a street lamp where drivers will see it more clearly at night, and not close to any driveways.

With thanks for your consideration,

Michael and Tina Berins
